EDUCATION

University of South Florida, College of Engineering — Bachelor of Science in Computer Science Tampa, FL | December 2026
GPA: 3.81 | **Awards:** USF Dean's Honors recipient, Bulls Lead Program, NASPA Certified Peer Mentor

Relevant coursework: Program Design, Software Engineering, Software System Development, Data Structures and Algorithms, Generative AI, Object-Oriented Programming, UI/UX Design, Agentic AI, Operating Systems

SKILLS & CERTIFICATIONS

Languages: Python, TypeScript/JavaScript, SQL, HTML/CSS, C/C++/C#, Java, Swift, Bash, PowerShell

Frameworks & Libraries: React.js, Next.js, Node.js, Flask, FastAPI, OpenCV, Pandas, NumPy, SciPy, TensorFlow, PyTorch, FAISS

Databases: MongoDB, PostgreSQL, MySQL, NoSQL, Drizzle ORM, Pinecone, DuckDB

Tools & Platforms: Git, GitHub, MS Office 365, Tableau, Figma, Docker, Kubernetes, Linux, Ansible, AWS, Azure, CUDA, Claude Code

Certifications: CodePath: Intermediate iOS Development, Technical Interview Prep, Foundations of AI Engineering

EXPERIENCE

Software Engineering Intern — AbbVie North Chicago, IL | May 2026 – Present

- Accelerated enterprise drug discovery processes by 20% by engineering an end-to-end predictive MLOps image-processing CI/CD pipeline that processes I-JEPA PyTorch embeddings to classify clinical cellular phenotypic phases
- Scaled visualization capacity 20x by building bioinformatics platforms that render 1M+ concurrent interactive data points at sub-100ms latency and sustain 60 fps using React 18/TypeScript, WebGPU, Web Workers, and TanStack routing
- Slashed data retrieval latency by 40% and eliminated pipeline bottlenecks by constructing an asynchronous FastAPI microservice backend (15+ RESTful endpoints) integrated with AWS S3 to run cosine similarity algorithms on microscopy datasets

AI/ML Research Assistant — USF Bellini College of AI, Cybersecurity, and Computing Tampa, FL | May 2026 – Present

- Diagnosed student cognitive states in real time with sub-250 ms latency by spearheading a secure CanvasLTI EdTech platform that evaluates memory context by mapping cognitive frameworks, achieving 83.3% risk-flag detection accuracy
- Reduced passive answer seeking by 40% by developing a React-based generative UI and a zero-leakage Python evaluation harness using LangChain and Pydantic that enforces deterministic JSON schemas and generates context-aware follow-up prompts

Procurement Card Student Assistant — USF BFSS Tampa, FL | September 2023 – April 2026

- Streamlined expenditure approvals for 350+ PCards by automating financial verification processes with Python libraries
- Optimized financial reconciliation workflows for J.P. Morgan & Chase, reducing statement processing time by 10%
- Accelerated approval flow to securely process 150+ approvals per day by developing AI-driven ticketing systems with Jira APIs

Business and Technology Intern — Veer Pharmachem April 2022 – July 2022

- Reduced reporting errors by 95% and analysis time by 20% by developing a Power BI dashboard to visualize 500+ QC batches
- Eliminated 3+ hours of weekly manual checks by programming an automated inventory tracker in C, tracking 250+ reagents
- Increased sales inquiries by over 30% by redesigning website lead capture forms with standard UX principles using Figma

PROJECTS

Promptless AI-Assisted Learning (PAAL) App — Full-Stack AI Developer/Project Lead Team of 2 | April 2026

- Architected a deterministic RAG learning platform to eliminate manual prompt-engineering friction, orchestrating a 5-agent CrewAI and Gemini 2.5 Flash pipeline that ingested course material via LlamaParse, LangChain, and a Pinecone vector database
- Automated study workflows and ensured 100% grounded outputs by constructing a secure full-stack application featuring a 7-endpoint FastAPI REST backend and a SQLAlchemy and React 19 frontend that generate dynamic quizzes and personalized study guides

EERIS — Full-Stack Developer/Project Lead Team of 4 | April 2025

- Developed a secure full-stack expense management app for 1,000+ users, building a React and Vite frontend with OTP login and real-time tracking and ensuring code reliability through unit and integration testing with Agile methodologies
- Engineered a Node.js/Express.js REST API with a JSON backend (MongoDB-ready) that slashed processing times by 27% via an OpenAI API-LLM-powered receipt classifier and automated Nodemailer (SMTP) notifications

QuantumStock — Software Developer Team of 4 | August 2024

- Facilitated data-driven trading decisions by analyzing 5,000+ points and engineering a predictive stock analysis application in C# on the .NET Framework with a Windows Forms GUI and robust CSV data parsing
- Boosted trend-forecasting accuracy by 35% by integrating a Gemini API-powered "SmartCandlestick" AI module to detect 12+ unique patterns using data modeling and interactive data visualizations with Tableau and Plotly

LEADERSHIP

Marketing and Communications Chair | Engineering Council USF

May 2024 – May 2026

Technical Chair | Girls Who Code College Loop (USF Chapter)

January 2023 – May 2024
